

TaskDrop

"If you can ask for it, someone can drop it."

A unified reverse-marketplace: a **Poster** publishes an open-ended request with a benchmark price, **Workers** pitch and negotiate quotes, and funds sit in escrow until the work is verified. An Android app for the whole flow, plus a synced web app to view and monitor everything — with iOS to follow after success.

Services

Rare Product Procurement

Local Intel

Prepared **Sep 6, 2026** Initial surfaces **Android app + Web app** iOS **later, post-success**
Status **Planning – not yet built** **V4 · FIVERR-STYLE PAYMENTS**

01 The concept

Existing platforms force people into narrow buckets — food delivery, home repair, digital freelancing — with fixed pricing and no way to post an open-ended need. TaskDrop inverts the model: you post the request, the market comes to you, and **price is set by conversation** instead of an algorithm. Once a quote is locked, the money is handled the proven **Fiverr way** — full escrow up front, deliver, review, then payout.

Dual-mode app

A seamless toggle between **Post a Request** (User mode) and **Find Work** (Worker mode) in one account.

Dynamic quoting

Posters set a benchmark price; workers pitch quotes and negotiate directly, in-app. The poster picks the quote he likes to lock the price.

Interactive reels

A Reels-style feed where **workers showcase real skills** and **posters showcase the work to be done in a video**.

Interactive feed

A poster can post his task flagged as **"Urgent"** or **"Unique"** so it stands out to the right workers.

02 Tech stack & how sync works

The initial build is **Android app + Web app only**; an iOS app comes **later, after the product proves successful**. As an early-stage startup, every layer is chosen to be **free-tier or open-source wherever possible** — **without compromising on the smoothness/performance** of the apps. Both clients talk to **one backend with realtime built in**, so a bid placed on the phone appears on the dashboard instantly.

LAYER	CHOICE	COST / WHY
Backend / DB	Supabase — Postgres, Realtime, Auth, Storage, RLS	Free tier ; realtime + RLS (admin-only pages) out of the box, open-source.
Android app	Flutter (or React Native)	Free / open-source ; smooth for a video-heavy reels feed. iOS added later from the same codebase.
Web app	Next.js + React (Vercel)	Open-source + free tier ; fast dashboard on the same Supabase project.
Payments / Escrow	Razorpay Route (or Stripe Connect)	Pay-per-transaction only ; escrow, milestone splits & commission are first-class.
Currency	Dynamic localization + free FX API	Free tier ; auto-shows local currency (\$, ₹, ...) from a base value.
Media feed	Supabase Storage / Cloudflare	Free tier ; CDN-backed photo & video delivery.
Notifications	Firebase Cloud Messaging	Free ; push for new bids, messages, and status changes.
Maps / radius	Google Maps free tier / OpenStreetMap + PostGIS	Free tier / open-source ; distance filtering & local-intel geo.

STARTUP COST PRINCIPLE

Start on **free tiers and open-source** across the stack; adopt paid services **only when scale demands it**. Smoothness is never traded away — Flutter keeps the feed fluid, and one Supabase backend keeps Android and Web perfectly in sync.

Monthly infrastructure cost breakdown

Three realistic stages. **Stage 0 (MVP / validation)** runs almost entirely on free tiers. **Stage 1 (early production)** moves the core services to their entry paid tiers once we can't risk cold-starts. **Stage 2 (scaling)** reflects overages and heavier compute. Payment processing is **pay-per-transaction**, so it's revenue-linked, not a fixed monthly cost. Prices are indicative 2026 list rates (USD).

SERVICE	STAGE 0 · MVP	STAGE 1 · EARLY PROD	STAGE 2 · SCALING
Supabase (backend/DB)	Free — \$0	Pro — \$25	Pro + compute/egress — ~\$75–150
Vercel (web app)	Hobby — \$0	Pro — \$20	Pro + bandwidth — ~\$40–80
Cloudflare (media/CDN)	Free — \$0	Free — \$0	~\$20 (higher egress)
Firebase Cloud Messaging	Free — \$0	Free — \$0	Free — \$0
Maps (Google free tier / OSM)	Free — \$0	Free — \$0	~\$0–30 (past free credit)
FX rate API	Free — \$0	Free — \$0	~\$10 (paid tier)
Play Store (one-time \$25)	~\$2*	\$0	\$0
Domain	~\$1	~\$1	~\$1
Est. fixed total / mo	≈ \$3	≈ \$46	≈ \$175–290

PAYMENTS (VARIABLE, NOT FIXED)

Razorpay ≈ 2% + 18% GST per domestic transaction (0% platform fee for the first 90 days) — deducted per order, so it scales with GMV and is covered by our 20% worker commission + 3% poster fee, never a standing monthly bill.

*Play Store is a one-time \$25 developer fee, amortized here; Apple's \$99/yr applies only at the post-success iOS stage.

03 Who uses it

Poster / User mode

Posts requests, reviews bids, locks the worker quote he likes, pays the full amount into escrow, reviews the delivery, and accepts or requests revisions.

Worker / Worker mode

Browses the feed and tasks, sends quotes, does the work, uploads proof, gets paid after the 7-day clearing period.

Same account, both modes — separate reviews

One profile toggles between posting and working. Crucially, each account carries **two separate rating/review sets — one for its Poster role and one for its Worker role**. They are shown **separately by role and are never merged** into a single combined score.

Admin / ops ADMIN-ONLY · RBAC

Moderation, Resolution Center disputes, payout oversight, and cancellation monitoring. All admin pages are visible **only to the Admin role** — enforced in UI and backend (row-level security). Posters and Workers never see them.

04 The task lifecycle

Every task moves through one main line of states. Price is discovered by TaskDrop's quote-and-lock flow; once the quote is locked, the money is handled the Fiverr way — escrow up front, deliver, review, payout.

OPEN

01 · Request posted

Poster publishes the request — with **no image, a single image, or a video under 1 minute** talking about the work. The poster **must set a time limit for the task in the quote itself**, and can **edit the time limit or quote price anytime** before lock. Workers can **counter-quote with a different price and/or a different time limit**.

↓ Poster picks the worker quote he likes

poster · lock

LOCKED

02 · Price fixed, funds escrowed

The chosen quote becomes the fixed order amount and the poster pays the **full amount into escrow** up front (contacts stay masked). **Other bids stay open** — the poster may **assign the task to multiple counter-quoting workers** at once.

SHOWN TO THE POSTER AT PAYMENT

"Don't worry — your amount won't be credited to the worker unless you're satisfied. You hold the right to push the task to 'Completed'; until then your money stays safe in escrow, and it will be credited back to you if the work is not done."

↓ First worker to slide swipe-to-start wins

worker · start ▶

TASK_STARTED

03 · Work is underway · contacts revealed

The **first worker to move the task to "Task Started" gets to proceed**; the other assigned workers can no longer proceed, and **their escrow is auto-refunded to the poster**. Only now do **both parties see each other's real contact details** and chat in-app. Payout mode is the **poster's choice: milestones or one-time** — after starting, **the worker can also request the poster to switch to milestones**. Default is one-time after completion.

↓ Worker uploads proof & marks done

worker · work done

WORK_DONE

04 · Delivery under review

Proof (photos / video / files) is submitted. **No payout yet**. The poster gets a **3-day review window** to Accept or Request Revisions.

↓ Poster taps Accept (or 3 days elapse)

poster · accept

COMPLETED

05 · Order accepted → clearing

Escrow is released to the worker minus the 20% commission and enters a **flat 7-day clearing period**. Both sides leave ratings and reviews, which stay public on their profiles (by role).

Delivery & exception paths

WORK_DONE → REVISION_REQUESTED

Within the 3-day review window the poster can send the order back with notes. The worker redelivers; the review window resets. No payout moves until the poster accepts or the window auto-completes.

WORK_DONE → AUTO_COMPLETED

If the poster neither accepts nor requests revisions within **3 days**, the order auto-completes and escrow is released to the worker — the Fiverr auto-accept safety net.

Multi-assign → first to start wins

When a poster assigns the task to several counter-quoting workers, the **first worker to reach "Task Started" locks the task**; the remaining assignments are released, those workers can no longer proceed, and **any escrow paid for them is auto-refunded to the poster**.

LOCKED → CANCELLED (before Task Started)

No grace window. The poster can cancel for **free — no fee is charged to the worker in any case**. The only consequence is that the **poster can leave a bad rating / review for the worker**, since the worker did not move the task to "Task Started" even after being assigned.

TASK_STARTED → CANCELLED (poster-initiated, after start)

If the poster cancels after the worker has started, the **poster pays a 5% fine on the locked order value** and the **worker can leave a bad rating / review for the poster**. Logged in the **Admin Cancellation Monitor** as `cancelled_by = poster`.

TASK_STARTED → CANCELLED (worker-initiated, after start)

The worker can also cancel after Task Started. Escrow is returned to the poster (Resolution Center settles any partial work), the **poster may leave a bad review for the worker**, and this cancellation is **tracked in the Admin Cancellation Monitor** as `cancelled_by = worker`.

TASK_STARTED → OVERDUE → CANCELLED (past quoted time, full refund)

When `now > task_time_limit` and the task isn't yet Work Done, it is flagged **OVERDUE**. The **poster can cancel with a FULL escrow refund and NO 5% fine** (the fine applies only when cancelling a worker still within time). The worker may get a bad review, and it is **logged in the Admin Cancellation Monitor** as `cancelled_by = poster`, **reason = overdue** — so admins can track workers who repeatedly miss their quoted time.

Any state → DISPUTED (Resolution Center)

Either side can open a dispute over a late, undone, or unsatisfactory delivery. Admin reviews evidence and decides a full or partial refund; the outcome affects the worker's rating and standing.

05 Payments, solved the Fiverr way

1 · Price discovery stays TaskDrop's

TaskDrop: `post → quote → lock`

The poster posts a benchmark **with a required task time limit** (both editable anytime); workers pitch competing quotes, optionally countering on price and/or time. The poster **picks the quote he likes**, which becomes the fixed order amount.

2 · Full payment up front into escrow

Fiverr: `pay in full at order`

At lock, the poster pays the **entire locked amount into escrow** (plus a 3% poster service fee) before the worker starts.

POSTER REASSURANCE AT ESCROW PAYMENT

"Don't worry — your amount won't be credited to the worker unless you're satisfied. You hold the right to push the task to 'Completed'; until then your money stays safe in escrow, and it will be credited back to you if the work is not done."

3 · Deliver → review → accept / revise

Fiverr: 3-day accept window

After Work Done, the poster has a **3-day review window** to Accept or Request Revisions; unanswered orders **auto-complete** and release escrow.

4 · Commission & poster fee

Fiverr: 20% seller + buyer fee

TaskDrop takes a **flat 20% worker commission** on every completed order and a **3% poster service fee** on the locked value.

5 · Clearing period before withdrawal

Fiverr: cleared-funds hold

Worker earnings clear a **flat 7 days** after completion for all workers, then move to a withdrawable balance.

6 · Cancellation rules

No grace window

Before start: free, no worker fee; poster may leave a bad review. **After start (poster):** 5% fine + bad review, logged for admin. **After start (worker):** escrow back to poster, bad review, logged for admin. **Overdue (past quoted time):** poster cancels with **full refund, no fine**; bad review; logged as reason = overdue.

7 · Payout mode — poster's choice

Milestones or one-time

Poster-set milestones, or **worker-requested milestones after Task Started**; otherwise a **single one-time payment** after completion (default).

Locked-in defaults

RULE	DEFAULT
Price setting	Poster benchmark + required task time limit (both editable) → poster locks the quote he likes
Counter-quote	Free — accept posted price or counter on price and/or time limit
Escrow charge	Full locked amount up front at lock, with a "money safe in escrow" message
Multi-assign	Multiple allowed → first to Task Started wins ; others released & escrow auto-refunds
Payout mode	Poster-set or worker-requested milestones ; else one-time after completion (default)
Review window	3 days after Work Done → auto-complete unless revised/disputed
Worker commission	Flat 20% of the completed order
Poster service fee	3% of locked value (no small-order fee)
Clearing period	Flat 7 days for all workers before withdrawal
Cancel — before start	Free, no fee to worker ; poster may leave a bad review
Cancel — after start (poster)	5% fine on poster ; bad review; logged in admin monitor
Cancel — after start (worker)	Escrow back to poster ; bad review; logged in admin monitor
Cancel — overdue (past time)	Poster cancels with full refund, NO fine ; bad review; logged reason = overdue
Reviews / contacts	Reviews public anytime, separate by role ; contacts unmask only at Task Started

06 Feature set

Accounts & trust

- Phone-OTP + email sign-in, profile with skills & tags

- **Two separate rating/review sets per account** — Poster-role & Worker-role, **never merged**
- **Role-based access** — admin pages hidden from Posters/Workers

Posting, quoting & negotiation

- Post with **optional media (none / image / <60s video)**, benchmark price, **required time limit**, location
- Flag a task as "**Urgent**" or "**Unique**"
- **Free counter-quotes** on price and/or time; other bids stay open; multi-assign supported

Transactions & monetization

- **Full escrow on lock** with reassurance message; **milestones or one-time** payout
- 20% worker commission + 3% poster fee; flat 7-day clearing
- **Fiverr-style payment methods; dynamic local currency** (\$ / ₹ ...)
- Wallet, withdrawals, invoices, Resolution Center & **multi-assign auto-refunds**
- **Featured & Premium Listings** — paid boosts (see section 08)

Communication & visibility

- In-app chat (text / media / voice / live video)
- **Contacts masked until Task Started, then revealed**; reviews always public (by role)

07 Payment methods & currency

Payment methods (Fiverr-style)

- **Credit / debit card** — Visa, Mastercard, American Express, Discover
- **PayPal** · **Apple Pay** (iOS) · **Google Pay** (Android) · **In-app Balance**
- Availability by country & device; **no cryptocurrency**. Razorpay Route / Stripe Connect underneath.

Dynamic currency localization

- Prices **auto-display in local currency** by location — US sees **Dollars (\$)**, India sees **Rupees (₹)**.
- Derived from a **base value** with **daily exchange rates**; user can change it in settings.

08 Featured & Premium Listings

META-ADS STYLE

What can be boosted & what it does

- Promote **a task post or a Reel**; pushes to **top of feed / search**, adds a **"Featured"/"Sponsored" label**, keeps it visible longer.
- Indicative fee **₹150–₹500 in India**, scaling with budget & duration.

Campaign controls (Meta-style)

- **Budget** (total/daily) · **Duration** · **Audience** (location/radius/pillar) · **Objective** (reach/bids/views).
- Admin oversees all active promotions.

09 Application flow — all scenarios

The complete state machine, from posting to payout. The **green spine** is the happy path; the **amber boxes** are cancellation branches and the **blue box** is disputes. Every cancellation after start — poster, worker, and **overdue** — is logged in the Admin Cancellation Monitor.

Overdue (past quoted time) →

Poster cancels · FULL refund · NO fine

logged · cancelled_by=poster · reason=overdue

BRANCH C · DISPUTE – AVAILABLE AT ANY ACTIVE STATE

Either side disputes →

Resolution Center (admin) →

full / partial refund

→ affects rating

END

» PARALLEL · MONETIZATION (INDEPENDENT OF TASK STATE)

At any time the poster can **Boost** a post or reel — Meta-ads-style **budget · duration · audience · objective** — to raise visibility.

ONBOARDING & AUTH

1. Splash
2. Welcome
3. Sign up — phone OTP / email
4. Login
5. Profile setup
6. Permissions

HOME & FEED

1. Home feed — reels-style
2. Post detail + CTA
3. Search & filters (Urgent/Unique)
4. Map view

WALLET & MONEY

1. Wallet / balance
2. Escrow & 7-day clearing
3. Payout / withdraw
4. Transactions & invoices
5. Payment methods & currency

POSTER • USER MODE

1. Post a Request — Urgent/Unique
2. Post details — media, price, time limit
3. Boost a post / reel
4. Bid review & compare
5. Lock quote → escrow (+reassurance)
6. Assign one/many; payout mode
7. Active task — chat + contact
8. Review — Accept / Revise / Cancel

WORKER • WORKER MODE

1. Available Tasks
2. Accept price or Counter-quote (free)
3. My Bids
4. Swipe-to-start (first wins)
5. Active job + request milestones + **cancel**
6. Upload proof & Mark Work Done
7. Earnings & payout

MONEY & ANALYTICS

1. Wallet & earnings
2. Transactions & invoices
3. Analytics
4. Profile & reviews (Poster / Worker)

ADMIN CONSOLE

ADMIN-ONLY

1. Users management
2. Content moderation
3. Resolution Center / disputes
4. Payouts & clearing oversight
5. Promotions management
6. **Cancellation monitor** — poster & worker (see section 12)
7. Platform analytics

12 Admin cancellation monitor ADMIN-ONLY

A dedicated admin-only page tracking **all cancellations after "Task Started"** across **three categories**: **poster-initiated** (5% fine), **worker-initiated** (worker abandons after starting), and **overdue** (poster cancels a worker who ran past the quoted time — full refund, no fine).

What it shows

- **Split counts** for poster-cancelled, worker-cancelled, and **overdue** cancellations, with time-period filters (day / week / month).
- **Table**: task, poster, worker, date, locked amount, **cancelled_by**, **reason (overdue / normal)**, penalty/ refund, review left.
- **Repeat-offender views** for posters, workers, and — importantly — **workers who frequently go overdue**.
- Backed by a **cancellation log** filtering TASK_STARTED → CANCELLED, keyed on **cancelled_by** and **reason**.

13 Data model

users · profiles · roles(admin/poster/worker) · tasks(time_limit · flag: urgent|unique) · bids/quotes(price · time_limit) · assignments(multi · escrow_per_assignment) · **escrow** · payments · **milestones** · wallets · messages · feed_posts(media≤60s video) · **promotions** · reviews(poster_role|worker_role) · notifications · revisions · proofs · **cancellations_log(cancelled_by · reason)** · disputes/resolution · **clearing_ledger** · settings

GROUP	FIELDS
Status	OPEN · LOCKED · TASK_STARTED · OVERDUE · WORK_DONE · REVISION_REQUESTED · COMPLETED · AUTO_COMPLETED · CANCELLED · DISPUTED
Cancellations	cancelled_by (poster / worker) · reason (overdue / normal) · phase (before / after start) · penalty_or_refund · all surfaced in admin monitor
Overdue	flagged when now > task_time_limit & not yet Work Done → poster cancel = full refund, no fine
Bids & assign	assignments = multiple, each own escrow · first TASK_STARTED wins; others released & escrow auto-refunded
Payout	payout_mode (milestones / one-time) · editable poster-set or worker-requested post-start
Money	escrow_amount · commission_pct (20%) · poster_fee_pct (3%) · post_start_cancel_penalty_pct (5%) · clear_at (+7d)
Reviews	poster_rating & worker_rating separate, never merged · contacts_revealed_at (= started_at)

14 Build phases

1 · MVP — Android (Flutter) + Supabase

Auth & roles, post request, feed, bids + negotiation, lock → escrow with reassurance, multi-assign → first-to-start wins + auto-refunds, chat, proof + review/accept, cancellations (all types) logged.

2 · Web app — Next.js

Read-mostly dashboard, analytics, messages — synced, role-gated.

3 · Trust & money — Razorpay + admin

Role-separated reviews, wallet/payouts, 20%/3% fees, 7-day clearing, milestones/one-time, cancellation fines, Resolution Center, admin console + **cancellation monitor (poster & worker)**.

4 · Growth & monetization

Featured & Premium Listings, quote credits/subscription, referrals.

5 · Scale & post-success additions

More pillars, regional expansion, **iOS app**, and a **verification badge** (trust signal, no perks) — after success.

15 Open decisions

Mobile framework

- **Flutter** — recommended; smooth reels feed, free/open-source, easy iOS path later.
- **React Native** — shares a language with the Next.js web build.

Payments provider

- **Razorpay Route** — recommended; India-first, native escrow & milestone splits.
- **Stripe Connect** — global, limited India domestic support.

Future / post-success additions

- **iOS app** from the same Flutter codebase after success.
- **Verification badge** — trust signal, no perks; **not in current scope**.
