taskdrop.

Plan A, Plan B, Razorpay, Cashfree

Payments and the wallet feature: what each plan does, how they differ, and how to explain TaskDrop to the payment companies

7 November 2026 · Prepared for the TaskDrop founder

Advice and explanation only. Nothing in the app was changed.

About the RBI points in this document

Every statement about RBI rules (PPI licences, the draft PPI directions of 22 April 2026, whether marketplaces are exempt) comes from **law-firm summaries**, because the rbi.org.in PDFs did not open. **Your lawyer must confirm them.** This document does not claim that either plan is legally compliant, and it is not legal, tax or financial advice.

INSIDE

1. The one-page summary
2. Plan A, stage by stage
3. Plan B, stage by stage
4. The differences page
5. Pros, cons and when to switch
6. Real-world examples
7. How to explain this to customer care
8. The pitch: Cashfree and Razorpay
9. What is still unconfirmed + glossary

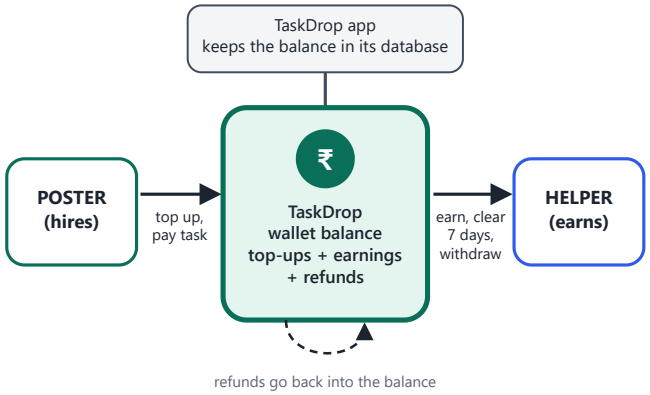

Plan A details were checked against the TaskDrop code on 7 Nov 2026 (wallet migrations 063, 066, 079 and the money rules in *packages/rules*).

1 · SUMMARY

Who holds the money? That is the whole difference.

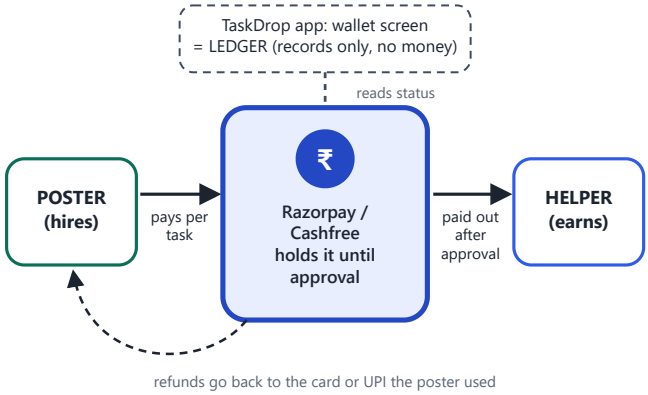

Plan A is what TaskDrop has built. Plan B is the fallback if Plan A is blocked.

PLAN A · The wallet (built today)

TaskDrop holds the money

PLAN B · Pay per task (fallback)

Payment company holds the money

What Plan A is doing

Plan A is the wallet TaskDrop has already built. Every user has one TaskDrop balance. A poster adds money to it by UPI or card (the smallest top-up is ₹50). When they pick an offer, the offer plus a 3% service fee is taken from the balance and locked for that task. After approval, the helper's share (the offer minus a 10% commission) goes into the helper's balance and can be withdrawn after 7 days. Refunds go back into the same balance. Withdrawals go to a saved UPI ID or bank account through RazorpayX payouts.

Why Plan A exists

The owner chose one simple balance on 29 Sep 2026. Posters pay in one tap, and helpers can let earnings build up. It is already built.

What Plan B is doing

Plan B is pay per task. There is no balance to top up. The poster pays the offer plus the 3% fee by UPI or card at checkout. Razorpay or Cashfree holds that money, not TaskDrop. When the poster approves (or 3 days pass), the payment company pays the helper's share to the helper's bank or UPI and TaskDrop's fee to TaskDrop. Each helper does KYC once with the payment company. Refunds go back to the card or UPI the poster used. The wallet screen stays, but it only shows records.

Why Plan B exists

A balance people can top up, withdraw and pay others with looks like an RBI-regulated wallet (PPI). Razorpay asked for a PPI licence on 5 Nov 2026. If the payment company holds the money, TaskDrop holds none.

Plan A: the wallet (built today)

Read each row left to right. The box marked **₹ HELD HERE** shows where the money is at that moment. Under Plan A, **top-up IS possible**.

Stage	Poster	TaskDrop	Payment company (Razorpay / Cashfree)	Helper	Who holds the money?
a **Poster adds money (top-up)**	Adds money by UPI or card (Add funds).	₹ HELD HERE Amount lands in the one TaskDrop wallet balance.	Razorpay collects the payment into TaskDrop's account.		**TaskDrop** Top-up: YES. Smallest top-up ₹50.
b **Poster posts a task and pays**	Picks an offer. Offer + 3% service fee is taken from the balance at once.	₹ HELD HERE Locks that amount for this task.	? TO BE CONFIRMED Pay a task straight by UPI with no top-up: not in the current app.		**TaskDrop** Short wallet: the app asks to top up the gap.
c **Money held while work happens**		₹ HELD HERE Shows as "locked in a task in progress".		Does the work, marks it done, can add proof.	**TaskDrop** Rupees sit in TaskDrop's Razorpay account.
d **Approve, or 3-day auto-complete**	Has 3 days to approve or report a problem.	₹ HELD HERE No answer in 3 days: task completes by itself.			**TaskDrop**
e **Helper receives the money**		₹ HELD HERE Books its fee: 3% from poster + 10% commission from helper.		Offer minus 10% goes into the helper's balance; clears in 7 days.	**TaskDrop** Clears after 7 days.
f **Helper withdraws**		Takes the amount out of the balance and queues a payout.	RazorpayX sends it to the saved UPI ID or bank.	Gets the money. Can also spend the balance on tasks.	**TaskDrop, then the helper** Any time after clearing.
g **Cancel, dispute, refund**	Cancel before start: offer + fee back to balance. After start: 5% fine.	₹ HELD HERE Admin decides disputes; a win for the poster refunds the balance.		Gets the 5% fine if the poster cancels after start.	**TaskDrop** Refunds go into the balance.
h **Credits and promos**		₹ HELD HERE Since 29 Sep there is no separate credit: top-ups, earnings and refunds are one pool.			**TaskDrop** One balance, all withdrawable.

₹ held here · helper's money · to be confirmed · a step, no money held

Checked in the code

In the current app a task is paid only from the wallet; if the wallet is short, the app asks the poster to top up the missing amount first. The server still accepts an older "pay this task by card" payment for older app builds, so whether a poster may pay a task directly by UPI without topping up is **to be confirmed** with the owner. Auto-hire: if an offer is auto-accepted and the wallet is short, the task waits until the poster tops up and pays.

Plan B: pay per task, the payment company holds the money

Same rows, same lanes, so you can compare with the previous page. Under Plan B, **top-up is NOT possible**: the poster pays per task, and only promo credits exist, which cannot be withdrawn.

Stage	Poster	TaskDrop	Payment company (Razorpay / Cashfree)	Helper	Who holds the money?
a **Poster adds money (top-up)**	✕ NOT POSSIBLE No "Add funds". Money is paid per task only.	Keeps no balance at all.			**Nobody: still in the poster's own bank** Top-up: NO.
b **Poster posts a task and pays**	Picks an offer and pays offer + 3% fee by UPI or card at checkout.	Opens the payment company's checkout. Touches no money.	₹ HELD HERE Collects the payment and puts it on hold.		**Payment company** Paid at checkout.
c **Money held while work happens**		Ledger shows "pending hold" as a record.	₹ HELD HERE Holds it (Easy Split hold, or Route "Settlements On Hold").	Does the work, marks it done, can add proof.	**Payment company** Cashfree: up to 45 days on hold.
d **Approve, or 3-day auto-complete**	Has 3 days to approve or report a problem.	On approval (or 3 days), tells the payment company to release.	₹ HELD HERE Still holds the money until told to release.		**Payment company**
e **Helper receives the money**			Splits: helper share (offer minus 10%) and TaskDrop fee.	Has done KYC once (PAN, address proof, bank or UPI).	**Payment company, then the helper** KYC once, before the first payout.
f **Helper is paid out**		Records the payout in the ledger.	Pays out to the helper's bank or UPI.	Gets the money directly.	**The helper** No in-app balance to withdraw.
g **Cancel, dispute, refund**	Refund goes back to the card or UPI used to pay.	Admin decides disputes, then instructs the refund.	₹ HELD HERE Sends the refund. After-start 5% fine: split rules to be designed.		**Payment company, then back to the poster** Never into a balance.
h **Credits and promos**	Can use promo credit as a discount on a task.	Grants promo credit. Spend on tasks only.		✕ NOT POSSIBLE Cannot be cashed out or withdrawn.	**No real money** Promo credit cannot be withdrawn.

₹ held here · helper's money · not possible · a step, no money held

Plan B is not built

Plan B is a design idea only. It would change the money code (checkout payment, hold and split, helper KYC, refunds to source, wallet screen becomes a record list) after a design step, and only with the owner's yes.

4 · THE DIFFERENCES PAGE

Plan A and Plan B, side by side

✅ good ❌ not possible ⚠️ risk or work ❓ check this

Topic	Plan A · the wallet (built)	Plan B · pay per task
Who holds the money	TaskDrop. A balance in TaskDrop's database; the rupees sit in TaskDrop's Razorpay account.	The payment company (Cashfree Easy Split first, Razorpay Route as fallback). TaskDrop holds none.
Top up and park money in the app	✅ Yes. Add funds by UPI or card (from ₹50) and keep it in the app.	❌ No. Pay per task only. Nothing to park or withdraw later.
Paying for a task	Taken from the balance when the poster picks an offer. If short, top up first.	UPI or card at checkout when the poster picks an offer.
How a helper gets paid	Share lands in the helper's balance after approval.	Payment company splits the held money and pays the helper's share.
Withdraw timing	Clears 7 days after completion, then withdraw any time (RazorpayX to UPI or bank).	Paid out after approval on the provider's schedule. Exact timing to confirm with the provider.
Refunds	Back into the wallet balance.	Back to the original card or UPI. Never into a balance.
Credits	No separate credits since 29 Sep: one withdrawable balance.	Promo credit only. Spend on tasks; cannot be withdrawn.
Wallet screen	Real balance: the number is money TaskDrop holds.	Same screen, but a ledger: tasks, earnings, pending holds, payouts. Stores no money.
RBI / PPI risk	⚠️ High. Top-up + withdraw + pay others looks like a PPI wallet. Razorpay asked for a PPI licence on 5 Nov 2026.	✅ Low. TaskDrop holds no balance, so a PPI licence should not be needed (lawyer to confirm).
Payment-company risk	⚠️ Razorpay may refuse without a PPI licence.	❓ Route needs over ₹40 lakh turnover; Cashfree hold max 45 days; Cashfree turnover rule unknown.
KYC for helpers	The helper must save a UPI ID or bank account before withdrawing. No per-helper KYC with the payment company.	Each helper completes KYC once with the payment company (linked account / vendor).
Fees (same in both)	Poster: offer + 3% service fee. Helper: admin-set commission, now 10%. Cancel after start: 5% fine, paid to the helper.	Same fees. Payment-company fees per payment, split and payout come on top (ask).
Work to build	✅ None. Already built.	⚠️ Checkout payment, hold and split, helper KYC, refunds to source, ledger screen. Design step first.
Effect on old owner decision	✅ Keeps the 29 Sep wallet decision.	⚠️ Reverses the 29 Sep wallet decision. Needs the owner's yes.
Best for	Fast in-app payments if the law and Razorpay allow a wallet.	Launching without a PPI licence, with a payment company that agrees in writing.

5 · PROS, CONS AND WHEN TO SWITCH

Weighing the two plans

Plan A · the wallet

Good

- ✅ Already built and running in the app today.
- ✅ One-tap payment from the balance.
- ✅ Helpers can let earnings build up, or spend them on tasks.
- ✅ Refunds land in the app at once.

Not so good

- ⚠️ Looks like a PPI wallet (RBI risk).
- ⚠️ Razorpay already asked for a PPI licence (5 Nov 2026).
- ⚠️ A licence needs a Private Limited company with about ₹5 crore net worth, growing to about ₹15 crore in 3 years. Not realistic now.
- ⚠️ "Add by card, withdraw to UPI" can be misused with stolen cards, so TaskDrop carries that fraud risk.

Plan B · pay per task

Good

- ✅ TaskDrop holds no money, so a PPI licence should not be needed (lawyer to confirm).
- ✅ Refunds to the original payment method are easy to explain.
- ✅ The payment company does helper KYC.
- ✅ The usual set-up payment companies offer marketplaces.

Not so good

- ⚠️ Needs a design step and new money code.
- ❌ Users cannot park money in the app.
- ❓ Provider limits: Route needs over ₹40 lakh turnover; Cashfree holds up to 45 days; an unregistered business may be refused.
- ⚠️ Extra payment-company fees per split and payout.
- ⚠️ Reverses the owner's 29 Sep wallet decision.

When to switch from Plan A to Plan B (any one of these)

1. The lawyer says Plan A needs an RBI PPI licence.
2. Razorpay or Cashfree refuse Plan A in writing.
3. The PPI licence is out of reach (it is today: Private Limited plus about ₹5 crore net worth).

Until then nothing changes in the app. The decision stays with the owner.

What stays the same either way

- **The wallet record list (ledger, task H34)**: safe to build under Plan A or Plan B.
- **18+ rule**: every user must be 18 or older.
- **Privacy rules**: only the area name shows until a helper is chosen; exact address and contacts unlock when work starts.
- **3-day approval window**: the poster approves or reports within 3 days, else the task completes by itself.
- **The fees**: offer + 3% service fee from the poster, admin-set commission (now 10%) from the helper, 5% fine for cancelling after start.

6 · REAL-WORLD EXAMPLES

Who works like Plan A, and who works like Plan B?

Read the caveats at the bottom. These examples show patterns; they do not prove what TaskDrop is allowed to do.

PLAN A STYLE Their own licensed wallet

Names from the RBI list of authorised PPI issuers.

- Amazon Pay (Amazon Pay balance)
- Ola Money (Ola Financial Services)
- Mobikwik Wallet
- PayU
- Navi
- **BlackBuck** (TZF Logistic Solutions): a trucking marketplace with its own PPI licence. **The closest match to TaskDrop.**
- Spice Money
- Pluxee
- Bajaj Finance
- Aditya Birla Capital Digital
- Dhani Pay (Transerv)
- Jupiter (Amica Payment Services)

A possible Plan A variant

Swiggy's wallet (2019) ran through ICICI Bank as an RBI-compliant PPI: a wallet run under a licensed partner, not Swiggy's own licence.

PLAN B STYLE The payment company splits and holds

Named on Razorpay's own customer-story pages (read in excerpt only).

- **ExploreLifeTraveling**: travel hosts; pays hosts at a time that suits its own policy. **The closest match to TaskDrop.**
- Medlife
- Goalwise
- PaisaBazaar (payouts to AMC accounts)

Like Plan B's promo credits (partial evidence)

Urban Company's partner credits cannot be withdrawn, like Plan B promo credits. This is partial evidence only.

Not a Plan B example: Zerodha

Zerodha is a SEBI-licensed broker. It holds client money in segregated bank accounts it operates. The ledger idea is similar, but the legal basis is different.

⚠ Honest caveats

- No named Cashfree Easy Split customers were found.
- The Razorpay pages are marketing pages, read in excerpt only.
- It was **not** confirmed that these companies use the "hold until approval" setting.
- Plan A-style companies hold their own RBI licence (or use a bank partner). TaskDrop has neither today.

7 · ON THE CALL

How to explain this to Razorpay or Cashfree customer care

What to say (about 30 seconds)

> "TaskDrop is a task marketplace in India. A poster pays for one task at a time by UPI or card, and we want you to hold that payment until the poster approves the work. Then your split product pays the helper's share to the helper's bank or UPI and our platform fee to us. TaskDrop keeps no user balance and holds no customer money, and refunds go back to the original payment method."

⚠ Do not say "escrow"
Payment companies treat true escrow as a separate regulated product. In forms, choose the category **"Marketplace / Online services"**.

⚠ Avoid these words
"wallet balance" and **"the money stays with us"**. Both describe Plan A and can trigger a PPI-licence request.

Questions to ask, and get answered IN WRITING (email)

1. Does Easy Split / Route allow a marketplace like TaskDrop where **individual workers with no GSTIN** receive payouts?
2. Is there a **minimum turnover**? (Route needs more than ₹40 lakh domestic turnover; Cashfree's rule is not stated.)
3. Can a **registered sole proprietorship** onboard, and which documents do you need (GST, or Shop & Establishment + Udyam; current account; utility bill)?
4. Can the helper's share be **held until the poster approves**? For how long (Cashfree: up to 45 days)? What happens when the hold expires?
5. How do **refunds** work after a split, and can refunds go to the **original payment method**?
6. How are **disputes and chargebacks** handled?
7. Will you confirm **in writing** that this set-up removes the **PPI-licence request**?
8. **Fees**: payment fee, split or payout fee, and instant-settlement fee.
9. **Helper KYC**: what are the steps, and how long does it take?
10. Can a **platform commission** be taken from the split?

? Tip
Ask for the reply by email from an official address, and save it. A phone answer does not count for the decision to switch plans.

8 · THE PITCH (PLAN B)

Ready-to-paste text for Cashfree and Razorpay

> ⚠ **Use Plan B wording only**
>
> Old text said "the money stays with us until the poster confirms". That is Plan A wording. Do **not** use it. Say the payment company holds the funds until the poster approves, TaskDrop keeps no user balance and holds no funds, and refunds go to the original payment method.

CASHFREE Full pitch

PASTE THIS

TaskDrop (taskdrop.in) is a task marketplace for India, on the web and as an Android app. A poster posts a task with a price, for example buying groceries, a small repair, a delivery or a piece of remote work, and a verified helper accepts and completes it. All users are 18 or older and sign in with a verified phone number. Typical tasks cost ₹150 to ₹1,000. We want to use Cashfree Payment Gateway with Easy Split so that Cashfree holds each task payment until the poster approves the work. TaskDrop keeps no user balance and holds no customer funds. Helpers are individuals who complete KYC with Cashfree as vendors. Refunds go back to the original payment method.

How we would use Cashfree:

1. The poster pays the task price plus a 3% service fee by UPI or card through Cashfree when they hire a helper.
2. Cashfree holds the helper's share while the work is done.
3. The poster has 3 days to approve or report a problem; if they do nothing, the task completes automatically.
4. On approval, Easy Split pays the helper's share (the price minus our commission, currently 10%) to the helper's bank account or UPI, and our platform fee to TaskDrop.
5. If a task is cancelled, or a dispute is decided for the poster, we refund through Cashfree to the original payment method.
6. Each helper is onboarded once as a vendor with PAN and address proof.

RAZORPAY Full pitch

PASTE THIS

TaskDrop (taskdrop.in) is a task marketplace for India, on the web and as an Android app. A poster posts a task with a price, for example buying groceries, a small repair, a delivery or a piece of remote work, and a verified helper accepts and completes it. All users are 18 or older and sign in with a verified phone number. Typical tasks cost ₹150 to ₹1,000. We want to use Razorpay Route with Settlements On Hold so that Razorpay holds each task payment until the poster approves the work. TaskDrop keeps no user balance and holds no customer funds. Helpers are individuals who complete KYC as Route linked accounts. Refunds go back to the original payment method.

How we would use Razorpay:

1. The poster pays the task price plus a 3% service fee by UPI or card through Razorpay Checkout when they hire a helper.
2. Route transfers the helper's share to the helper's linked account with the settlement on hold while the work is done.
3. The poster has 3 days to approve or report a problem; if they do nothing, the task completes automatically.
4. On approval, we release the hold, and the helper's share (the price minus our commission, currently 10%) settles to the helper's bank account; our platform fee stays with TaskDrop.
5. For helpers who prefer UPI, we would like your advice on whether RazorpayX Payouts fits, without TaskDrop holding the funds.
6. If a task is cancelled, or a dispute is decided for the poster, we refund through Razorpay to the original payment method.

Short versions and the wallet answer

CASHFREE Short version (under 300 characters)

PASTE THIS

TaskDrop (taskdrop.in) is an Indian task marketplace. Posters pay per task by UPI or card; Cashfree Easy Split holds the funds until the poster approves, then pays the KYC'd helper and our fee. We hold no user balance; refunds go to the original payment method.

(261 characters)

RAZORPAY Short version (under 300 characters)

PASTE THIS

TaskDrop (taskdrop.in) is an Indian task marketplace. Posters pay per task by UPI or card; Razorpay Route holds the funds on hold until the poster approves, then settles the KYC'd helper's share and our fee. We hold no user balance; refunds go to source.

(254 characters)

If they ask about the wallet

> "The in-app wallet screen is a read-only record of tasks, earnings, pending holds and payouts. It stores no money. Promo credits can only be spent on tasks and cannot be withdrawn."

Only say this once Plan B is chosen

Today the app still runs Plan A, where the wallet does hold a real, withdrawable balance. The pitch and the wallet answer describe Plan B. Use them when the owner has said yes to Plan B, or say clearly that this is the set-up TaskDrop will move to.

Facts the pitch relies on

- Web and Android app at taskdrop.in. Tasks are local and remote.
- Users are 18+ and sign in with a verified phone number.
- Typical tickets ₹150 to ₹1,000.
- Poster pays the offer + 3% service fee; helper pays a commission, currently 10% (set by admin).
- Poster has 3 days to approve or report before auto-complete.
- Payout after approval to bank account or UPI.

9 · BEFORE ANYONE DECIDES

What is still unconfirmed

- ? **RBI points** come from law-firm summaries, because the rbi.org.in PDFs did not open. That includes the draft PPI directions of 22 Apr 2026 and the report that they do not exempt marketplaces. **The lawyer must confirm.**
- ? **Cashfree's turnover rule** for Easy Split is unknown. Ask in writing.
- ? **Cashfree and unregistered businesses**: a Reddit post (unverified hearsay) says Easy Split is not available to unregistered businesses, so register the sole proprietorship first.
- ? **Route's turnover threshold** (more than ₹40 lakh domestic turnover in FY26 or FY25, plus a written payer-payee confirmation) needs current confirmation from Razorpay.
- ? **PPI licence figures** (Private Limited, about ₹5 crore net worth, about ₹15 crore in 3 years) are general figures; confirm with the lawyer.
- ? **Paying a task directly by UPI under Plan A** without topping up: the current app does not offer it; an older per-task payment path still exists on the server. To be confirmed with the owner.
- ? **Stripe Connect** was looked at and set aside: it is not true escrow and leaves KYC and AML with TaskDrop.
- ⚠ **The decision is still open** with the owner. Plan B reverses the 29 Sep 2026 wallet decision, so it needs the owner's yes, then a design step, before any code changes.

Glossary

PPI	Prepaid Payment Instrument. RBI's name for a wallet or card that holds money people paid in advance. Issuing one needs an RBI licence.
Escrow	A neutral party holds money until both sides are satisfied. True escrow is a separate regulated service, so avoid the word with payment companies.
Easy Split	Cashfree's product that splits one customer payment between a platform and its vendors, and can hold a vendor's share for up to 45 days.
Route	Razorpay's product that splits one payment between a platform and linked accounts, with an option to hold settlements.
Linked account	A helper's account inside Razorpay Route (Cashfree calls it a vendor). It has its own KYC and bank details.
Settlement	When the payment company moves collected money into the receiver's bank account.
Payout	Money sent out to a person's bank account or UPI ID (for example through RazorpayX payouts).
KYC	Know Your Customer: proving who someone is, with PAN, address proof and bank details.
Ledger	A record list. In Plan B the wallet screen is a ledger: it shows what happened, but stores no money.

Prepared 7 November 2026. Advice and explanation only. Nothing in the app was changed. Not legal, tax or financial advice.
